

MICHIGAN AVE CLIENT

LOCATION: Chicago, IL

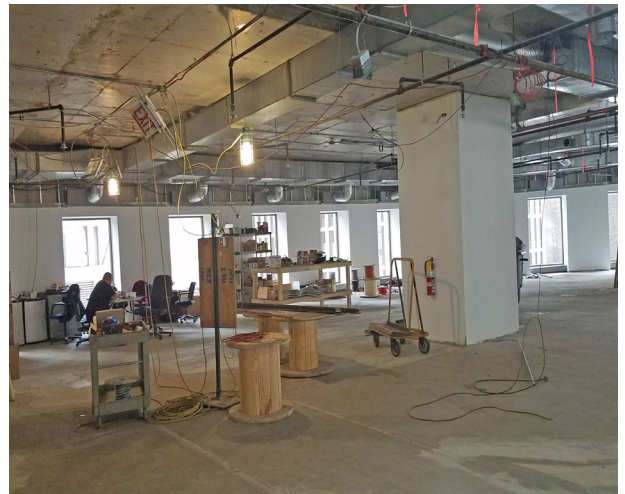

SPACE: 20,100 square ft.

SCOPE: Reconfigured and created new workstations. Designed and furnished ancillary areas in the office space.

THE PROBLEM: This client needed a budget-friendly design that suited multi-generational employees. There were special requirements, and the client needed advice on how to create an efficient work flow while maintaining a highly sophisticated office space.

THE SOLUTION: Vertical Interior Design analyzed the team's functions to understand their roles and interactions with each other. This analysis was critical in providing the client with a space that allowed the team to be efficient, impactful, and relevant. Sensitive to the budget, VID incorporated existing workstations and other furniture elements with the new. The end result was a highly dynamic space that highlights open ceilings, clean lines, different geometries and heights, while accommodating individual's needs. Add in magnificent views of the lakefront, and you have an office that is like no other.
